Hey!

Thanks for submitting a SWE Problem Creator trial! Just wanted to let you know that you can be compensated for the created problem that you submitted by reuploading it for the ongoing Medley Quest on Shipd (<https://shipd.ai/dashboard?quest=medley>) **along with a solution to it.**

Your submission will be attached to this email for your reference. Please note that before you submit the problem and accompanying solution, you must read the Medley Quest guidelines (<https://shipd.ai/dashboard/medley-info>) to make sure your contribution passes all the criteria. **This is your responsibility that the submission is in an acceptable format and only ones that are approved will be eligible for payouts.**

Here is your trial form submission:

Problem description:

BATTLE GROUND MOBILE INDIA: Scenario: Krafton Organisation is trying to add a new match in Battle Ground Mobile India(BGMI). The conditions of the game is like below: N Number of players (say N - user input) are standing in a straight line one after another. Each player is holding a gun (gun of every player is same type) and have variable health(user input). Assume that the Bullet can travel any distance in 1 sec. All bullets of i^(th) player have same power. You are given an array named bulletPower[i] represents the power of every bullet of i^(th) player. Initially when time starts (i.e time = 0) every player fires 1 bullet per 1 sec in RIGHT direction. Here is another condition: If any player j is hit by i^(th) player then -> j's health is decreased by bulletPower[i] (bullet power of i^(th) player). If health of any player becomes <=1 (0="" or="" less)="" then="" the="" player="" eliminates="" from="" the="" game="" sharp="" at="" that="" time.="" the="" eliminated="" player="" vanishes="" from="" his="" position="" and="" next="" right="" player="" (if="" present)="" becomes="" the="" neighbour="" of="" previous="" player..="" given="" the="" health="" and="" bulletpower="" of="" each="" player.="" you="" need="" to="" return="" minimum="" time="" in="" which="" n-1="" players="" will="" eliminates="" from="" game="" (since="" elimination="" of="" player="" 1="" is="" impossible).="" input="" format="" n="" :="" integer="" :="" number="" of="" players="" health="" :="" int[]="" :="" health="" of="" n="" players="" power="" :="" int[]="" :="" power="" of="" n="" player's="" bullet="" output="" format="" minimum="" time="" :="" integer="" constraints="" <=10^5<><=10^9 where="" i="" [0, n]="" <=bulletpower[i]<= 10^9="" where="" i="" [0, n]="" fill="" your="" code="" here="" import="" java.util.*;="" public="" class="" main{="" public="" static="" void="" main(string="" args[]){}="" scanner="" scan="" new="" scanner(system.in);="" int="" size="" scan.nextlnt();="" int[]="" health="" new="" int[size];="" power="" new="" int[size];="" health="" new="" int[size];="" int[]="" power="" new="" int[size];="" health="" array="" for(int="" i="" 0;="" i="" n;="" i++)="" {="" health[i]="" scan.nextInt();="" power[i]="" scan.nextInt();="" }="" }

Starting code:

```
//Efficient Code Approach
import java.util.*;
public class Main{
    public static void main(String args[]){
        Scanner scan = new Scanner(System.in);
        int size = scan.nextInt();
        int[] health = new int[size];
        int[] power = new int[size];
        //health Array
        for(int i=0; i<n; i++){
            health[i] = scan.nextInt();
        }
        //power Array
        for(int i=0; i<n; i++){
            power[i] = scan.nextInt();
        }
        int answer = 1;
        while(true){
            int[] a = {power[0], answer};
            for(int i=1; i<n; i++){
                if(health[i]-power[i]>0){
                    a[0] = power[i];
                    a[1] = answer;
                }
            }
            answer = Math.max(answer, a[1]);
            break;
        }
        return answer;
    }
}
```

Test suite:

TEST CASES : Testcase 1: input 1: N = 3 health : [1, 2, 1] bulletPower : [2, 1, 3] Output 1: 1 Explanation: At time t=0 : All the players fires 1 bullet from their gun : Health : [1, 0, 0] At time t=1 : Player 2 and 3 eliminates since health[2nd player]<1 and health[3rd]<1 health="1" so="" until="" time="" t="1" :="" n-1="" 2="" players="" got="" eliminated="" and="" only="" one="" player="" is="" presented="" hence="" the="" output="" is="" 1.="" testcase="" 2:="" input="" 2:="" n="" 4="" health="" [4, 5, 2, 6]="" bulletpower="" [1, 3, 2, 3]="" output="" 2:="" 5="" explanation="" at="" time="" t="" 0:="" health="" [4, 5, 2, 6]="" and="" bulletpower="" [1, 3, 2, 3]="" at="" time="" t="" 1:="" (all="" players="" fire="" 1="" bullet)="" health="" [4, 4, -1, 4]="" (player="" 3="" got="" eliminated)="" health="" [4, 4, 4]="" and="" bulletpower="" [1, 3, 3]="" at="" time="" t="" 2:="" (now="" another="" bullet="" is="" fired)="" health="" [4, 3, 1]="" (no="" one="" got="" eliminated)="" health="" [4, 3, 1]="" and="" bulletpower="" [1, 3, 3]="" at="" time="" t="" 3:="" (another="" bullet="" is="" fired)="" health="" [4, 2, -2]="" (player="" 3="" got="" eliminated)="" health="" [4, 2]="" and="" bulletpower="" [1, 3]="" at="" time="" t="" 4:="" (another="" bullet="" is="" fired)="" health="" [4, 1]="" health="" [4, 1]="" bulletpower="" [1, 3]="" (no="" one="" got="" eliminated)="" at="" time="" t="" 5:="" (another="" bullet="" is="" fired)="" health="" [4, 0]="" health="" [4]="" (all="" n-1="" 4-1="" 3="" players="" got="" eliminated)="" and="" (only="" 1="" player="" is="" present)="" hence="" the="" final=""

To: James Shi <james@datacurve.ai>

I hope this message finds you well. I completed my government ID verification on the Shipd.ai website over a week ago, and the status still shows that it is under review.

Since when I attempt to submit my problem on the website, I encounter the message displayed in the attached screenshot.

I kindly request you to complete the ID verification process, as I am eager to participate in the Medley event and contribute my best by creating and solving new problems.

If possible send me resources consisting of how to submit a newly created problem etc information.

Here is the screenshot for your reference.
